About

The ACD Agent Module will configure itself in Agent mode, based on the user's logon name. When the Agent Module logs onto the ACD Controller Module, the logon name is tested to see the job classification of the person logging on. If the person who logs on is only an Agent (as opposed to a Supervisor or an Administrator), then certain functions will be turned off or made inaccessible.

Shown below is the Main Screen of the ACD Agent Module.

Supervisor Manual - Introduction

The TM-2000 ACD / Call Center is designed to be the primary point of contact an organization has with its callers, providing a quick and efficient method to obtain the person in the organization who is most qualified to handle callers' needs. Its integral parts consist of:

- Agents (representatives who answer the calls)
- Supervisors (people who view Agents and Queue statistics)
- Administrators (people who control call flow and manage the call center)
- Hardware and software to distribute calls to the appropriate Agents

The Agents use a PC to make themselves "Available", make inquiries and look up information for the caller. The selection of an Agent to receive a call is based on:

- Agent availability (Status set to "Available")
- Phone state (phone is on hook)
- The Agent's skill set (ability) and preference level
- The amount of time the Agent's phone has been idle (on hook)

When Agents become available to take calls (by logging in and selecting "Available"), they are marked as "Available" Agents for each of their skill-set assignments.

The goal of the TM-2000 ACD solution is to immediately connect each caller to the most appropriate resource or provide an interactive queue for callers when those resources are busy. They may also exit the queue and, upon returning to a menu, select among various options like:

- Listen to an announcement
- Transfer to an extension
- Leave a message with callback information and hang up

In order for the TM-2000 IP ACD to effectively route calls and provide the fastest response to the callers, it is critical that the Agent positions are available to receive the calls.

The TM-2000 IP ACD Call Completion Call Center is made up of a number of IP-based modules that have very specific tasks. These include:

- Event Server Module
- ACD Controller Module
- Hardware Interface Module (one or more)
- Agent Module
- Agent SoftPhone Module
- Agent Console Module
- Reporting Module

This manual discusses the use of one of these modules, the **ACD Agent Module**, which is used by the Agent to log on and off the ACD system. It also discusses the use of this module by an Administrator.

Supervisor Manual - Usage

About

Below you will find the the Usage Guide. It will go over how an agent should use the Agent Module.

Color Coding

There are several color coded signals that can be used to easily ascertain information on the T-Metrics ACD Agent Module. For example when an agent's line is being used (whether the phone is ringing, a caller is on the line, or a caller is on hold) the **Status** indic ator will change from a green **Available** to a blue **Available**.

Another indicator that will change colors, depending on the information it is displaying, is the number of agents available for each skill (discussed later in the Skillsets section). In the screenshots above, notice that the number of agents available in the "Holiday Support" skillset is "7", while the numbers displaying how many agents are available in the "Demonstration2" and "TM_IVR" skillsets are "1" and "0" respectively. When the agent detects that there is only 1 agent available in a skill it will display the number 1 with two asterisks to the right and it will display in the color **Orange**. When there are no agents available in a skill, the agent will display a "0" with two asterisks and it will display in **Red**. More information about these features is available in the **Status Window** and **Skillsets Window** sections.

Status Window

Shown below is the Agent Module in the **Connected to Server** State. This is the State that automatically displays when the Agent Module is opened if the software successfully connects to the server. The user will not receive calls until they Log On and become **Available**.

To Log On, simply press the **Log On** button if your logon name was entered automatically by the system (see above). If your name was not already entered, enter your logon name and then press the **Log On** button.

The Agent Module automatically detects that the user is an Agent and places them in the "Available" Status, making them ready to receive ACD calls. The figure below shows an Agent in the "Available" Status.

Status Changes

The **Status** drop-down menu allows the selection of the **Status** item. With the exception of the required "**Logged Off**" and "**Available**" **Status** items, the rest of the settings are chosen by the Administrator(s) and stored in the ACD Controller database. Typical additional settings are "**Performing Post Duties**" and "**Out to Lunch**". These settings will make the Agent "unavailable" to take calls. An Agent can only receive an ACD call if he/she is in the "**Available**" **Status** and the phone is on-hook (idle). Note: If an "**Available**" agent takes a call (off-hook state), the **Status** will change to a blue "**Available**" (see above section labeled "Color Coding").

To change the **Status**, place the mouse over the drop-down menu in the **Status Window** and click to show all existing **Status** options. Move the mouse pointer over the appropriate **Status** and click. The selected **Status** will then be the only one showing. Click on the **Change** button to complete the process.

Agent Changing Status from Available to Performing Post Duties

If an Agent is not going to be available to take ACD calls, then it is important for the agent to change their **Status** to make themselves "unavailable" (e.g., **Out to Lunch, On Break, Performing Post Duties**) so that calls will not ring at that position. Once the agent is ready to take ACD calls again, simply change the **Status** back to **Available**. Note that when an agent is in an "unavailable" state, the **Status** indicator color changes from green (**Status = Available**) to yellow (e.g. **Status = Performing Post Duties**).

Caller ID Window

This Window shows three pieces of data every time the agent has a call routed to them from the ACD. These data are **Caller ID, Hold Time, and Skillset**.

• **Caller ID** is the number that the caller is calling from. This may include the trunk number that the 10-Digit Number is a part of.

- Hold Time is the length of time for which the call has been in the system waiting for an answer from an agent.
- **Skillset** displays the Skill from which the caller needs assistance and thereby caused the ACD to route the caller to the agent. For instance, if an agent is a member of both Engineering and Support Skillsets, this indicator will display which of these two skills for which the caller is calling.

| Caller ID : | Hold Time : | Skill Set : |
|-------------|-------------|-------------|
| 6797 | 0 secs | TestSkill |
| | | |

Skillsets Window

This Skillsets Window provides an easy way to view statistics about all the Skillsets to which the user is connected. The **Available** colu mn provides the user with how many agents are in the "**Available**" state for each Skillset listed. The **Queue** column shows how many callers are in the queue for each Skillset waiting for an available agent. The **Msgs** (Messages) column shows how many (voice) messages each Skillset has.

At the top of the window is a display of the total of calls that are in Queue in the ACD and how many total Customer Messages there are:

| Skill | Avail | In Q | Msgs |
|----------------|-------|------|------|
| emonstration2 | 0** | 0 | 0 |
| oliday Support | 7 | 0 | 0 |
| UPPORT_RPTGRP | 8 | 0 | 0 |
| estSkill | 2 | 0 | 0 |
| M_IVR | 0** | 0 | 0 |
| OTALS | | 0 | 0 |

Expanded Version

Open the Expanded View screen by pressing this button:

Skills

Columns in the Skills Grid:

- **Skill** The name of the skill.
- Avail The number of agents with a skill level higher than '0' who are in the available position status.
- Level The viewing agent's skill level in the skill.
- In Q (In Queue) The number of callers in queue for that skill.
- Oldest The length of time that the oldest call in queue has been waiting for that skill.
- Wait Avg The average length of time that a caller waited in queue before being answered by an agent. The time window used is based on just the last four calls that were in queue. The reason for the deviation for this statistic is to give relevant information for real-time use. (This number can be more volatile to give a better picture of how long people are waiting right now)

- **Msgs** The number of voice messages (customer callbacks) waiting for processing in the queue.
- **Total** The total number of calls that have been assigned to the skill. The time window for this statistic is reset daily at midnight.
- Ansd The number of calls within 'Total Calls' that were answered by an agent same time window as Total Calls.
- Aban (Abandons) The number of calls within 'Total Calls' that were not answered by an agent same time window as Total Calls.
- AbanAvg (Abandoned Average) The average length of time that a caller waits for this skill before abandoning. The time window used is based on just the last four abandoning callers. The reason for the deviation for this statistic is to give relevant information for real-time use. (This number can be more volatile to give a better picture of how long people are waiting before hanging up right now)
- Aban % (Abandoned Percentage) The percentage of abandoned calls vs. Total Calls same time window as Total Calls.
- ASA (Average Speed of Answer) The average length of time that a caller waits once assigned to a skill before being answered by an agent. This, along with SLA, is based on a special window of time that is adjustable per skillset to allow for different standards for different skills.
- SLA (Service Level Agreement) The percentage of calls that were answered within the period of time as defined in the Controller module for that skill. This, along with ASA, is based on a special window of time that is adjustable per skillset to allow for different standards for different skills.
- **Group** The name of the group of which the skill is a part. If the skill is not part of a skill group then this column is blank.
- Off(Skill is Off) This checkbox is checked if the skill is turned off for the Agent. Administrators are able to assign the ability so that an Agent can turn off/on skills at will. This ability can be limited by the Administrators on a per skill basis.

Agents

- **Agent** This column displays all of the Agents which are available to give real time statistics based on the filters checked in the Skills Window.
- Ext The extension for the Agent's phone.
- Skill The skill of the last call the Agent took.
- Task– This column displays a more specific description of what an Agent is currently involved in. It can display Rea dy, Unavailable, ACD Call, Non ACD Call In, Non ACD Call Out, and Callback.
- State This column can display an icon and/or text of the current phone state. It can display Idle, On Call, Ringing, and Hold.
- Time The time that an Agent has been in their current State.
- **Status** This column displays the Status in which the agent is currently engaged.
- Time The time that an Agent has been in the current Status.
- **ACD Calls** The number of calls an Agent has taken from the T-Metrics ACD Queue.
- **ACD Avg** The average length of ACD Calls in minutes : seconds format.
- **Non-ACD** The number of calls an Agent has taken that were not sent from the T-Metrics ACD Queue.
- Non-ACD Avg The average length of Non ACD Calls in minutes : seconds format
- Emails Shows the number of emails handled by each agent.
- Chats- Shows the number of webchats handled by each agent
- Call Display The Caller ID for the last call an Agent took from the T-Metrics ACD Queue.
- Status Details-The area where an agent can put a description of what/or whom they are currently working on.

Custom Agent Filtering

This allows the supervisor to filter on a specific skill or by selecting one or specific group of person(s). **Custom Filter-** by skill **Edit Filter-** Lets you filter by selecting specific agents

Start WebRTC Chat

Allows agents or supervisors to chat with each other via a web chat.

Agent Callbacks Window

The Agent Callbacks window, accessed by choosing the "Edit" menu and then clicking "Agent Callbacks", is used when an Agent is working with a caller who will need to call back regarding the same problem. By using this feature, the Agent will be able to give the caller specific callback instructions, which will allow the caller to be connected to the same Agent that has helped before. You must be active, on an ACD call, to use this feature.

| Select Valid Time Period for Callbac | k Enter Caller Information |
|--------------------------------------|-------------------------------|
| The Remainder of Day | |
| Today and Tommorow | |
| The Next 5 Days | |
| The Next 10 Days | |
| 🛛 The Next 30 Days | |
| CallBack Information | |
| Callback PIN NA | |
| Callback Number NA | |
| | Request Agent CallBack Number |

Agent Callbacks Window

The Agent is able to enter a brief message about the call in the window pane on the right, such as "John Doe is calling back with the account information for his checking account"; choose the amount of time the callback will be valid from the **Callback Account is Valid For** list, such as "The remainder of today"; and then click on the **Request Callback Account Number** button. A Callback PIN will appear for the Agent to give to the caller, along with instructions as to what telephone number to call back. When the caller returns the phone call to the Agent this screen will reappear and the brief message entered by the Agent will appear in the white display list box in the right window pane where it was entered.

Emergency Button

Clicking on the **Emergency** button sends an immediate message to a Supervisor, making him/her aware that a particular Agent is having an emergency condition.

| EMERGENCY Msg from an Agent | × |
|--|--------|
| ACD Agent Message | |
| Emergency Request for Supervisor Agent DWEEDEN at 6774 Requires Emergency | Help ! |
| <u>О</u> К | |

Emergency Request Screen Pop

Messaging

The **Messaging** button is used by an Agent to request help from a Supervisor. Pressing this button brings up a form that allows the Agent to enter a text message that is then sent to the Supervisor. The Supervisor can respond and send a text message back to the Agent. They can continue sending text messages back and forth until the problem has been resolved. This is very handy when an Agent is working with a caller and wants to ask the Supervisor advice on an issue. The Supervisor is able to help the Agent without going to the Agent's position or without the caller realizing the Agent is getting help from the Supervisor.

A message box appears when the Agent clicks on the **Messaging** button. The Agent then fills out the text area and clicks on the **Send** button to send the message to the Supervisor.

The Supervisor receives the message and can write a response back to the Agent.

Supervisor Manual - Menu Bar Items

About

Listed below are the items on the **ACD Agent Module** menu bar.

File

Server Messages: This displays all messages between the server and the Agent client.

Show Activity Items: This option allows the agent to view all the activity items that are tied to each of the skills with which the agent is associated.

Show Expanded View: This opens the expanded view of the Agent Module.

Show Past Caller IDs: This option is used to view caller ID stamps from earlier in the day, as opposed to the one currently showing in the Caller ID window

Show Previous CallBack Messages:This function displays a window with a list of Customer Callbacks previously delivered to this agent position. The window will display the File Name, Caller ID, and Call Time of each Customer Callback. From this screen, a file can be selected and, by pressing the **Get File** button, downloaded to the local computer.

Show Callback Messages For All Agents: This function displays a window with a list of all Customer Callbacks previously delivered to any agent currently logged into the ACD. The window will display the File Name, Caller ID, and Call Time of each Customer Callback. From this screen, a file can be selected and, by pressing the **Get File** button, downloaded to the local computer.

Show past Emails: The feature allows the user to show all of the past ACD Emails. The window will display the EmailTime, FromAddress, Subject, and Reply Type.

Send New Email: This allows the user to create an email form from their Agent Module.

Exit: This is used to close the ACD Agent Module and log the Agent off the ACD system.

Edit

Agent Callbacks:

This brings up the Agent Callbacks window explained above.

Settings Menu

Accessed by means of the Edit > Settings, this window allows you to change several settings concerning the ACD Agent Module. The first option in the settings window is the **Connections and Miscellaneous Settings** menu.

Connection String

Description – The name of the current connection you are currently using
Server Address- The server where events are being sent to.
Connection Port-The current port being used. Please leave this as 21 unless otherwise advised by T-Metrics.
Connection State- the current state of the connection. This should be set to Active.
Interface- The setting of how you are interacting with your phone.

Traditional Fixed – A setting used in conjunction with a standard desk phone. (90% of users will use this setting) **Traditional Dynamic** – A setting used in conjunction with a set up where you log into your phone and your number can follow you. Your number is not tied to one desk phone.

Microsoft Lync – A setting used in conjunction with the Microsoft Lync Client as the agent phone. There are additional Microsoft Lync settings under the Unified Communications section.

TMetric SIP Softphone - A setting used in conjunction with a softphone instead of a handset.

Primary ACD DN – phone number or extension associated with the Agent

ACD Redirects – This setting enables the transfer of calls between instruments on the TM 2000 system. **Secondary ACD DNs (View/Edit)** – This is a setting used for sites that have multiple DNs set up at each individual operator station.

Bubble Forms and System Tray

Bubble Forms pop up when certain events occur, such as an incoming call or an instant message. From here, the administrator may enable/disable the Bubble Form feature, as well as configure the Bubble Forms' fade settings.

| | Patri | | /ou a qu | | × |
|--|----------------|-------------|----------|---|---|
| Custom Status Thresholds You can set custom time limits for position statuses and be no | otified when y | ou cross th | em. | | |
| Choose a status and set a time limit using the box on the right (0 i | - | | | | |
| Initial Logon Match Server Settings | | • | 0 | × | |

Custom Status Thresholds: This feature allows you to set the time limits for position statuses

| Audible Ale | erts |
|-------------|--|
| 📃 Play ar | n Audible Alert When a New Bubble Form Appears |
| ur | nless the bubble is for an Instant Message |
| u | nless the bubble is for a Status Change |

Audible Alerts: this feature allows a tone to be played for the bubble forms selected in the top menu.

| elect from the list of agents below, t | then select the triggers for which you wish to receive alert |
|---|--|
| AH SENTINEL | Alert me when Agent |
| ATSNOOTS BILL | Changes Position Status |
| BOO WILLIAMS LL C-3PO | Changes Phone State |
| CASEY | Crosses a Threshold |
| CASEYMOBILE CEDRICK HESSELBEIN CHRISWEB | Check All Check None |
| CONFROOM\ADMINISTRATOR DANIELLE | |
| DAVIS LOVE III | Clear Tagging for All Agents |

Agent Tagging: This allows you to choose triggers or alerts from other agents. For example: if Casey was selected and I chose to be alerted when his phone state changed, I'd get a notification every time he answered or hung up from a call.

| Bubble Forms for Popup Tools | |
|---|--|
| If your T-Metrics ACD Server is setup to pass popup information to the Agent Module in the form of a web request (a ticket from a helpdesk system, for instance) you can choose to use Bubble Forms to display the webpage instead of using your default browser. | |
| Use Bubble Forms for Server Provided Web Requests | |
| I would like Bubble Forms containing server provided web requests to: | |
| Close When the Incoming Call Ends | |

Bubble Form for Popup Tools: This lets the user choose the option of receiving the selected pop up bubble form in either a webpage layout or through their default browser (like a help ticket) and select if you would like that page to close when the call ends, manually, or when the bubble form fades (based on the time selected).

Data Grids

The **Data Grid Options** menu allows the administrator to customize how information is displayed within the Agent Module.

| Grid Formats : From here, changes may be | Column Choice and Order Choose your desired columns and their order. | Edit Grid Columns |
|--|--|-------------------|
| made to the grid display, concerning grid location, ordering, font, symbols, etc. | Grid Fonts Adjust the font size and style of the data grids. Current Font: Verdana 9.25pt Bold | Grid Fonts |

Customized Agent Grid Filter

The Agent Grid can be filtered on a specific skill by selecting the "Filter" checkbox next to the skill name. However, if desired, the Agent Grid can also be made to show only certain agents specified below by name.

Only Show the Agents Specified Below in the Agent Grid

| All Available Agents | | | Sele | ected Agents to Show |

| | | | | | | |
| 1 | | | | | | |
| | | | | | | |
| | Save Cancel Apply | | | | | |

Filename – The filename of the audio file to be used as a greeting Skill – The skill that is to be used with the greeting file Phonenumber – The phone number of the user UserName – The agent's username

Instant Messages

From this menu, the user can configure the instant messenger and chat features included in the ACD Agent Module.

| Instant Messages | |
|--|--------|
| Preferences for the Instant Message feature of the ACD Agent Module. | |
| Pop Incoming Instant Messages to the Front | |
| Play Sound for Incoming Instant Messages | |
| 🔽 Show Status Changes of Other Agents in Instant Message Windows | |
| Chat Logging | |
| I will manually save any chat conversations I wish to keep | |
| I would like my chat conversations to be saved automatically in this folder: | |
| C:\Tmetrics\TMIACDAgentModule_v3.0\Chat Logs\ | Change |

Pop Incoming IM's to the Front - This option allows incoming Instant Messages to display in the forefront of the user's screen. It will load on top of any other window that is open

Play Sound for Incoming IM's- This option allows an audible sound to play when an instant message is received through the ACD Agent Module

Show Status Changes of Other Agents in Instant Message Windows – This option will display the current status of the agent the user is messaging in the chat window

Chat Logging - Manually save chat conversation. Select where/what folder you would like your chat conversations to be saved

Licensing

This menu will show the path to the license file for your software. Please do not change this path, unless you are an Administrator who has spoken with a T-Metrics Representative.

Recordings

This menu, is where call recordings are enabled and it will also show you the path of where the recordings will be uploaded to. Please do not change this without being an Administrator who has contacted T-Metrics support.

| Supervisor Functions | | |
|---|---|-------------------|
| ? 🔲 Enable Recording Error Monitoring | ? | Manage Exceptions |
| (See 'Bubble Forms' for Recording Error Alerts) | ? | View Past Alerts |
| | | |

This feature allows supervisors to receive an error message as a bubble form when there are issues monitoring an agents recordings.

Sound Devices

This menu allows the user to choose which sound device will be used in conjunction with the ACD Agent Module software.

| ACD Agent Module Options | | | |
|-----------------------------|------------------|---|-------|
| Connections Bubble Forms | | e used to select which Sound Device you prefer to use in conjunction It Module software. | |
| Data Grids | | | |
| Greeting Files | Play Device | Speakers (Jabra UC VOICE 550 US 🔹 | |
| Instant Messages | Recording Device | Microphone (Jabra UC VOICE 550 + | |
| Licensing | Listen Device | Default Device 🔹 | |

| Sound Devices | | | |
| Trouble Reports | | | |
| Unified Communications | | | |
| User Interaction | | | |
| | | | |
| | | | |
| | | Save | Apply |

Play Device – The audio device used for audio playback for the agent

Recording Device – The audio device used to capture call recordings

Listen Device – The audio device used by a supervisor when listening to an agent's live call.

Trouble Reports

This menu helps user get in touch with T-Metrics Support easily when experiencing problems. It contains the agent's contact information.

Unified Communications

This menu allows user to configure setting both for T-Metrics Unified Communications (ACD Routed Emails and Social Media). This menu also allows user to configure setting both for T-Metrics Unified Communications (WebChat/Enterprise Messaging)

| WebRTC URL | https://webchat.tmetrics.com/webchat/rtc/agentchat |
|---------------|---|
| Show Setting | s For: |
| When a chat | room goes without user interaction for 🔹 5 🛬minutes: |
| 🔲 Bring the C | nat Room Window to the Foreground (Pop to Front) |
| 🔲 Flash the C | hat Room Window in the Taskbar |
| Note: These | settings apply to both ACD routed chat rooms and user created chat rooms. |
| | |

This menu allows user to configure settings through Microsoft Lync.

Microsoft Lync

- Allow the Agent Module to sign me into Lync upon Login
- Allow the Agent Module to sign me out of Lync upon Logout
- 🖉 Keep my Lync Free-Text Status and my Agent Module Status Details in sync
- Show Lync Contacts in my Agents Grid (Allows for Instant Messaging, etc.)
- Adjust my Lync Status (presence) when my Position Status changes

Using the grid below, you may bind which of your Lync Presence options best match with your ACD Position Statuses.

| Lync Presence | | ^ |
|---------------|-----------------------------------|---|
| Available | - | Ξ |
| Away | - | |
| Away | - | |
| Away | • | |
| Away | • | 1 |
| | Available Away Away Away | Available Away Away Away Away |

User Interaction

This menu allows the user to make several selections to customize how they will interact with the Agent Module.

- 1. Allow Us of Keyboard (Enter Key) to Select Activity Items
- 2. Allow Use of Keyboard (Enter Key) to Change Position Status
- 3. Show My Current Status Time Next to My Position Status

- 4. Minimize the Agent Module to the System Tray
- 5. Confirm with User Prior to Sending Emergency Messages
- 6. Disable the Emergency Button
- 7. Show Status Details Input Box

The user may also assign **Global Hotkeys** to perform common actions via keyboard shortcut.

Global Hotkeys

Global Hotkeys allow you to assign keypresses to certain actions within the Agent Module. These keypresses will be detected even if the Agent Module is not in the foreground in Windows at the time of the keypress. This allows you to perform any of the actions below without having to switch windows to the Agent Module first.

Hotkeys require the use of modifiers (Shift, Alt, and Ctrl) to function. Commonly accessed keys, like letters and numbers, will require two modifiers while less commonly accessed keys, like the functions keys and Pause|Break, require only one modifier. For example:

VALID: Ctrl-Shift-F, Alt-F12 INVALID: Ctrl-C, F1

To assign a hotkey, simply click on the row for the action you wish to assign below. The row will turn red - then simply press the key combination you wish to use as the hotkey. To delete a hotkey, click on the row and then press DELETE key.

Activate Global Hotkeys

| Change to Available Position Status | (none) |
|-------------------------------------|--------|
| Change Position Status | (none) |
| Change Status Details | (none) |
| Change to First Unavailable Status | (none) |
| Loa Off | (none) |

The user may change the **language** from the list of options (English/French)

Region and Language -

The Agent Module is available in a select number of language and culture settings. Select from the options below to best fit your preferences.

Ŧ

English - (United States)

Toggle Skills

If an Agent has been given the ability to turn on and off Skills by a Supervisor, this feature will allow the Agent to perform those actions.

Toggle Skill Groups

Allows user to turn a specific skill group on or off.

Information

The Informaer is used to pop up the Information Directory, shown below, which is used to access information using a Windows Explorer-type of form. This data can be anything, including documents in text and RTF and pictures in such formats as BMP, JPG. Also URL address on the web can be accessed through the viewer. You can access this by pressing F11 on the keyboard.

| File Tools Phone Help | | |
|---|--------------------------------------|--|
| Ten Irfomatori I Updand 6/23/2010 3.14.56 | Walcome. Use the tree to navigate | |

Agent

The Agent Menu on the Menu Bar is the same as the Agent Menu in the Expanded View. See the Expanded View section for details.

Change Status:

The Supervisor can change the **Status** of an Agent simply by highlighting the Agent's name, choosing **Agent / Change Status** from the menu bar and then choosing the appropriate **Status** settings. Alternatively, a Supervisor can right-click on an agent's name and choose the **Change Status**" option. For example, if an Agent leaves for lunch still in the "**Available**" **Status**, the Supervisor can change the Agent's **Status** to "**Out to Lunch**" without leaving his or her desk. By doing this, the Agent will not receive calls when not available.

Listen & View:

A NOTE: The Administrator position must be equipped with the Supervisory Listen & View HASP[®] key or Soft License and the Agent must be equipped with a T-Metrics Agent TAP, SoftPhone or PhoneGroups Console to use this feature.

With the purchase of the additional hardware and software noted above at the Agent and Supervisor/Administrator positions, the Supervisor/Administrator can highlight an Agent's name and then select Agent / Monitor / Listen to be able to remotely listen to the caller and the Agent. If the Supervisor/Administrator selects Agent / Monitor / View, the Supervisor/Administrator will be able to remotely view the Agent's screen. This feature is very beneficial in training new Agents and monitoring Agents for quality control.

Request Trouble Report:

This feature will populate a new window which allows you to send a trouble report to TMetrics explaining the current issue/problem you are experiencing.

Send Instant Message:

Allows the Administrator to send a private instant text message to a particular Agent or to send a broadcast instant text message to all Agents.

Skill

Log out all agents with skill:

This function will logout all agents who have the selected skill. The user is warned before the action takes place:

| 🕕 Log O | ut All Agents × |
|---------|--|
| Cont | firm Log Out Operation |
| ? | Are you sure you wish to log out all agents with the skill 'ZACH'? |
| 0 | Yes <u>N</u> o |

Show all agents with skill:

This option shows all agents that are a part of the selected Skillset. You can use the button in the bottom left corner to display either all agents or just all agents that are logged in:

Supervisor Manual - Customizable Screen Pop Interfaces

T-Metrics has developed Screen Pop Interfaces for several of our customers. In each instance we have worked with the in-house expert from the customer site to develop tools that assist operators in using T-Metrics software in conjunction with their already existing systems.

T-Metrics has been able to successfully integrate several clients like CHCS, Remedy Interface, Magic Interface, and Web Client Interface.

Working with a customer to create a useful apparatus, T-Metrics has the ability to create software which will work with an existing system. For example, by merging our ACD and a customer service system owned by a customer, it is possible for a customer to enter a customer ticket number while they wait in queue and have the system "pop" a screen to the operator at the appropriate time bringing up their ticket containing all their information.

Supervisor Manual - MiniTAP

The MiniTAP

The Agent MiniTAP will allow for agent greetings and recording of telephone calls when using a Desk Phone. It is also required at each agent position for the **Supervisory Listen & View** feature when the agent is utilizing a desk phone. Additionally, a HASP or soft license at the Supervisor position would be required for Supervisory Listen & View functionality. When using a hard phone with a headset, an amplifier may be required. Contact T-Metrics Support for more information regarding the need for an amplifier. Connections with and without an amplifier are shown below.

THETRICS

Picture of the T-Metrics Agent MiniTAP & Connection Diagram

The MiniTAP device sits between the users PC and Desk Phone. The MiniTAP connects to the PC via USB, and then plugs into whichever audio hardware port the user wants to use on their Desk Phone (i.e., the handset or headset port). The actual audio hardware will then plug into the front of the MiniTAP. This allows the MiniTAP to sit between the audio source and the audio hardware, capturing the audio and sending it to the PC via USB to be recorded to a file.

MiniTAP with Amplifier

MiniTAP without Amplifier

Optional Features

The T-Metrics Agent module includes several optional features, which may be activated depending on the site's needs, hardware setup, and purchased services.

Supervisor Manual - Non-Call ACD Objects

Customer Callback Messages

Completing the Customer Message Information

This option is in place to allow an agent to retrieve Customer Messages (voice messages) left by a caller for a skill *manually* when the system is configured to withhold them until they are requested by an agent.

Conversely, the system can be configured so that callers can leave a Customer Message that will either be delivered to an "**Available**" Agent when there are no "live" calls to be presented, or delivered to an agent *as if it were a live call with its own place in queue* (depending on the way the system is configured). When a Customer Message is sent to an Agent, the Agent is presented with the **Customer Message Information** window shown below:

| Customer Message Information | | | |
|----------------------------------|--------------------------------------|--|--|
| Call Information | | | |
| Call Time : 6/25/2010 3:18:02 PM | | | |
| Skill : Support | | | |
| Caller ID : 6774 | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| Actions | | | |
| Listen To Message | Customer Unavailable Customer Called | | |
| Pla | ce Back into Message Queue | | |
| | ownload Copy of Message | | |
| | Use Caller ID to Dial | | |

Figure 28. Customer Message Information Screen Pop

In order to listen to the Customer Message, the Agent will click on the **Listen To Msg** button. The Agent's desk phone (either a standard phone or a T-Metrics SoftPhone box) will then ring and the Agent will be instructed to "Press any key to play the message".

- For Agents using a standard phone set, press any key on the telephone keypad.
- For Agents using a T-Metrics Console, go to **Telephone Tools** on the menu bar, select **DTMF Send <CTRL+Alt>**, and then press any digit on the keyboard.

The Agent can press any key to play the message again.

Completing the Customer Message Information

When the message has finished playing, the Agent must select one of the other buttons on the **Customer Message Information** window to indicate the action taken in regards to the message:

- If the Agent reaches the caller and completes the message, the Agent presses the **Customer Called** button and the window will close. This will mark the call as "Cust Called" in the call records log for reporting purposes.
- If the Agent is unable to complete the message (e.g., leaves a message for the caller, etc.), the Agent presses the **Cu stomer Unavailable** button and the window will close. This will mark the message as "Cust Unavailable" in the call records log for reporting purposes.

Closing the Customer Message Window without Call Resolution Selected

- If the Agent closes the **Customer Message Information** window by selecting the in the upper right-hand corner, the message will be sent back to the Agent to retrieve again. If the Agent receives an incoming call, the message will be sent to the Agent when the position is "**Available**". If the Agent makes his/her position unavailable (by selecting "**On Break**", "**Out to Lunch**", etc), the message will be routed to the next available Agent.
- If the Agent closes the Customer Message Information window by pressing the Close with No Action button, the message will be sent back to the Agent to retrieve again. If the Agent receives an incoming call, the message will be sent to the Agent when the position is "Available". If the Agent makes his/her position unavailable (by selecting "On Break", "Out to Lunch", etc), the message will be routed to the next available Agent.
- The **Customer Message Information** window **should not** be closed by these methods as it creates reporting errors in the call reconciliation process.

Agent Messaging

In addition to sending IM messages to Supervisors, Agents may send IMs to one another, if the Administrator has enabled "IM for All" for their skillset on the server:

| 🝓 Select Message Recipients 🛛 🗆 🗙 | 🍓 Select Message Recipients 🛛 🗌 | × |
|--|--|---|
| Send Instant Message to | Send Instant Message to | |

| | | |
| Cancel Send | Cancel Seno | d |

Figure 29. Agent(s) and Skillset Messaging Window

When "IM for All" is enabled, the Agent will see two bullet options: **Agent(s)** and **Skillset**. Under **Agent(s)**, the Agent may select one or several specified agents to whom they may send an IM message. Under **Skillset**, the Agent may choose to send an IM to ALL agents and supervisors with a selected skill.

Chat Function

The T-Metrics system also provides the option to use Chat Rooms. Unlike the IM feature, the Chat Rooms offer agents and supervisor to have a group discussion. If the site is using a chat server, and that server has been set in the ACD Agent Module's Instant Messaging Settings windows (see pages 18-19), then the Agent will see additional options when clicking on the **Messaging** key:

| 44 | Select | Message | Recipients | | × |
|----|--------|---------|------------|--|---|
| | | | | | |

| Send Ins | tant Message to |
|---|--|
| Agent(s) | O Skillset(s) |

| | | Join | - (| Cancel | |

Figure 31. Chat Room Selection

_

If the Agent selects **Create a Room**, a set-up window will appear, prompting the Agent to provide a Chat Room Name, select whether the room will be moderated or unmoderated, whether the room will be public or private, which agents will be allowed to issue invitations to the chat. The set-up windows also provided the Agent with the option of setting an initial topic for the chat:

| 🚯 Create a Chat Room | | — | | Х |
|--|--|--------------------|----------|--------|

T-Metrics Emailer

The T-Metrics Emailer provides the Agent with a singular communications solution. With the T-Metrics Emailer working in conjunction with the TM-2000 IP Platform, and the client's email server, Agents will receive all calls and emails by the same means. Rather than juggling their workload between the Agent Module and a separate email client, Agents will receive email messages from their Agent Module via pop-up window, when they are not taking calls or are otherwise **Available**.

| Place | : Back In Queue Redirect To Agent Spam Ignore Address Book 🗹 Direct Replies Back | to Me | Send | 1 |

Figure 33. Emailer Window

The Emailer Window:

- Email Information: Provides basic information, such as the "To" and "From" address, carbon copy and blind carbon copy lists, email subject line and attachments.
- Email: The body of the delivered email.
- Reply: Where the Agent types their response.
- Formatting Tab: Allows the Agent to change basic text formatting in the email
- Attachments Tab: Allows the Agent to add/remove files to their response as attachments.
- Spam: Allows the Agent to flag the delivered email as spam.
- Ignore: If selected, the delivered email will be marked as handled, but a reply is not sent.
- Address Book: Opens your email program's address book. (Microsoft Outlook will need to be open and have focus to pop the address book.)
- Direct Replies Back to Me: When checked, replies to this email chain will be automatically redirected to the agent who handled the message, and not placed in the general queue.
- Send Reply: Sends the Agent's response.

• Place Back in Queue: Allows the Agent to place an email message back in queue for the next Available Agent (the

redirecting Agent will be asked to explain why the email is being redirected):

| 3 | Redirect Not | es |
|------------------------|--------------------------|----------------|
| Why is this e-mail bei | ng redirected (100 chara | cter maximum)? |
| | | |
| | | |
| Submit | | Cancel |

• Redirect to Agent: Allows the Agent to redirect the email to another Agent logged into the ACD with the same Skill. The redirecting Agent will select an Agent to redirect to from a list of logged in Agents, then be prompted to explain why the email is being redirected as in the above screenshot:

| Select Desired Recipient | × |
|--------------------------|----|
| Select Desired Recipient | |
| CHELSEA | ^ |

Figure 36a. Redirect Reason

• The Agent who receives the redirected email, will also receive a pop-up with the message the previous agent noted in the input form:

| j | Redirected E-mail |
|------------|---|
| This email | was redirected to you by REBEKAH who included the following notes: Here you go! |
| | ОК |

Alternate Media Channels

The T-Metrics ACD is also capable of interfacing with Twitter, SMS, and webchat objects in the same way that it interfaces with emails. Agents will receive a pop-up window with the contents of the tweet/text/chat, and the ability to:

- Respond to the user who initiated the object, such as a Twitter user or customer on the TMetrics.com³ webpage
- Place the Object back in queue for another Agent
- Mark the source of the Object as Spam
- Ignore the Object, dismissing it from their Agent Module and readying them to receive another call or Object

The Web Chat also has additional functionalities such as maintaining a list of commonly used Agent responses to drag and drop into the chat window, seen below on the left, as well as inviting other Agents to the chat.

Outbound SMS

Agents can initiate SMS messages using the **File** → **Send New SMS** menu item in the Agent Module. To send an SMS, follow the directions below.

- Select the skill from which to send the message. A skill is tied to a phone number in the Multimedia Manager. Enter the phone number of the destination. Note that the country code needs to be included.
- •
- ex: If sending a text message to 704-525-5551, enter 17045255551.
- Country codes can be found here https://www.internationalcitizens.com/international-calling-codes/.
- Enter the message, up to 160 characters.
- Click Send.

If multiple SMS messages are to be sent, click Send Another to keep the SMS window open after clicking Send.
